Trophic Level BINGO!

As we talked about earlier, every organism on the planet belongs to a food web and each level of the food web is called a trophic level. As you move up the trophic levels you move from primary producers all the way up to top predators (also called quaternary consumers). This follows a fairly straight pattern from plants to top predators, and to help visualize this you will be building your own BINGO cards using the word bank below. You will notice that each letter represents a different trophic level (B=primary producer, I=primary consumer, N=secondary consumer, G=tertiary consumer, O=quaternary consumer) and when put in order will build a food web. There is NO free space, you must fill all of the boxes on the board with an organism. The first person to get BINGO wins a fabulous prize!

Word Bank

B	I	N	G	O
Primary Producers	Primary Consumer	Secondary Consumer	Tertiary Consumer	Quaternary Consumer
Bamboo	Field Mouse	Starfish	Raccoon	Tiger
White Oak	Deer	Snail	Sea Otter	Wolf
Seaweed	Squirrel	Rat Snake	O'Possum	Leopard Seal
Kelp	Zooplankton	Parrot Fish	King Snake	Killer Whale
Flowers	Sea Urchin	Robin	Blue Fish	Komodo Dragon
Grasses	Worms	Ladybugs	Harbor Seal	Eagle
Maple Tree	Aphids	Sparrow	Penguin	Shark
Phytoplankton	Cow	Gecko	Fox	Lion
Apple Tree	Giant Panda	Gorilla	Ferret	Grizzly Bear
Blackberry Bush	Geese	Poison Dart Frog	Red Panda	Wolverine
